Introduction:

We will develop a web-based system using HTML, CSS, Bootstrap, JavaScript, PHP, and MySQL. First, we will discuss our stakeholders to gather requirements. After That we will analysis these requirements and develop the system accordingly.

The Global BD Event Management System is a service-based system where users will be able to view the company basic info without login into the system and be able to contact the system admin. In this system there is an admin panel available where an admin will be able to login and manage the system accordingly.

Functional Requirements:

Common Feature:

1. **Home Page:** A home page will be available where system basic info will be given.
2. **About Us:** Here the company details and the service information will be given.
3. **Contact Us:** By this feature users will be able to contact with the admin by filling an input form and submit. Users will be giving their name, email, message etc. as input. After Click the submit button the information will be store in the MySQL database.
4. **View Mission and Vision:** Users will be able to view the company mission and vision. From this the user get a basic idea about the company services.
5. **View Staffs:** Users will be able to view company staffs and their information.
6. **View Programs:** User able to view all the programs by clicking the our program option form the system.
7. **View Gallery:** Users will be able to view the images of various event by clicking gallery option.
8. **View Latest News:** Users will be able to view the latest news by clicking news option.

Admin:

1. **View Dashboard:** After logging using the admin credentials admin will be able to the admin panel where the number of messages in last 7 days, number of approved user and total number of users will be displayed as a card format.

2. **View Users List:** Admin will be able to view the users list those are registered into the system with their basic info like name, email, contact number etc.
3. **View Messages:** Admin will be able to view the messages those are contacted from the users.
4. **View Companies:** Admin will be able to view the available company's information as table format where the company title, location is displayed.
5. **View Staffs:** Users will be able to view company staffs and their information. Also able to add new staffs.
6. **Add Images:** Admin will be able to add image in this system those are retrieve in view gallery option for students.
9. **View News:** Users will be able to view the news by clicking news option and also add new news by clicking the add news option.
10. **View Programs:** User able to view all the programs by clicking the program option form the dashboard. And also, able to add new programs and delete the existing programs.
